

LuNa smelter Ltd does tin smelting from cassiterite raw material. The specific nature of tin production is associated with a negative impact on the environment related to the generation of waste, noise emissions, dust, gas emissions into the atmosphere as well as water pollution.

To mitigate these environmental impacts, the leadership of LuNa smelter Ltd undertakes to:

- Prioritize Environmental friendly operations by maximizing the use of slag by-products, at each stage of the production process, by reducing the waste generated to a possible minimum by exploring possibilities to use the postproduction slag in the construction industry and selling waste products.
- Identify the environmental aspects and monitor their impact on the environment as well as the actions to mitigate them.
- Strive to comply with the requirements set by the law and regulations related to environmental protection that may apply to our activities.
- Strive to comply fully with applicable laws and other environmental regulations as well as the requirements of ISO 14001:2015.
- Reduce air emissions to the maximum extent possible,
- Reduce noise generation and its penetration into the environment,
- Raise the environmental awareness of our employees,
- Cooperate with parties interested in our environmental impact.

LuNa smelter Ltd leadership is committed to continually decreasing any negative impact on the environment, preventing its pollution, and applying the principle of continuous improvement of the environmental management system.

This policy originates at LuNa's Top Management and is made widely available to all internal and external stakeholders. It is implemented at all levels of responsibility within our organization.
